LUXEON® Rebel Phosphor-Converted (PC) Amber

Introduction
LUXEON® Rebel Phosphor-Converted (PC) Amber is an ultra-compact, surface-mount, high-power LED that delivers industry-leading standards for light output, color stability, flux density, color quality, and manufacturability. LUXEON Rebel PC Amber enables you to create never before possible lighting applications and:

• deliver more usable light, higher flux density, better color stability and light quality
• optimize applications to reduce size and cost
• tightly pack the LEDs for color mixing applications
• engineer more robust applications
• utilize standard FR4 PCB technology
• simplify manufacturing through the use of surface mount technology
• recognized under the Component Recognition Program of Underwriters Laboratories Inc. UL listing E327436.

Product Nomenclature

LUXEON Rebel PC Amber is tested and binned at 350 mA, with current pulse duration of 20ms. All characteristic charts where the thermal pad is kept at constant temperature (25°C typically) are measured with current pulse duration of 20ms.

The part number designation is explained as follows:

L X M 2 - A B C D - E F G H

Where:
- A — designates radiation pattern (value P for Lambertian)
- B — designates color (see LUXEON Rebel Binning and Labeling section)
- C — designates color variant (0 for direct colored variants)
- D — designates test current (value 1 for 350 mA)
- EFGH — reserved for future product offerings

Therefore products tested and binned at 350 mA follow the part numbering scheme:

L X M 2 - P L 0 1 - x x x x

Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Philips Lumileds projects that LUXEON Rebel products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700 mA. This projection is based on constant current operation with junction temperature maintained at or below 130°C. This performance is based on independent test data, Philips Lumileds historical data from tests run on similar material systems, and internal LUXEON reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid state lighting market. LUXEON Rebel is compliant with the European Union directives EICC, RoHS, REACH, PFOS & PFOA, Halogen content, as well as California Proposition 65. Philips Lumileds will not intentionally add the following restricted materials to the LUXEON Rebel: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE). For more information please visit www.philipslumileds.com.

Visual Appearance of LUXEON Rebel

All lighted LUXEON Rebel products will provide comparable Lambertian beam performance, suitable for use with commercially available optical systems. Without power, LED die within different reels may appear visually different. Please contact your Philips Lumileds or Future Electronics representative for further information.

<th>Minimum Luminous Flux (lm)</th>
<th>Typical Luminous Flux (lm)</th>
<th>Test Current (mA)</th>
<th>Typical Luminous Flux (lm)</th>
<th>Drive Current (mA)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amber</td>
<td>LXM2-PL01-xxxx</td>
<td>50</td>
<td>75</td>
<td>350</td>
<td>132</td>
<td>700</td>
</tr>
</tbody>
</table>

Notes for Table 1:
1. Minimum luminous flux performance guaranteed within published operating conditions. Philips Lumileds maintains a tolerance of ± 6.5% on flux measurements.
2. Typical luminous flux performance when device is operated within published operating conditions.
3. Philips Lumileds LEDs are packaged and binned in 10lm flux increment identified by flux category codes. Each reel contains only one flux category code.

Flux Performance, Binning, and Supportability

LEDs are produced with semiconductor technology that is subject to process variation, yielding a range of flux performance that is approximately Gaussian in nature. In order to provide customers with fine granularity within the overall flux distribution, Philips Lumileds separates LEDs into fixed, easy to design with, minimum luminous flux bins. To verify supportability of parts chosen for your application design, please consult your Philips Lumileds or Future Lighting Solutions sales representative.
## Optical Characteristics

### LUXEON Rebel PC Amber at Test Current

Thermal Pad Temperature = 25°C

<table>
<thead>
<tr>
<th>Color</th>
<th>Dominant Wavelength [2] (\lambda_0)</th>
<th>Typical Spectral Half-width [3] (nm) (\Delta \lambda 1/2)</th>
<th>Typical Total Included Angle [4] (degrees) (\theta_{90%})</th>
<th>Typical Viewing Angle [5] (degrees) (2\theta 1/2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amber [6]</td>
<td>588nm</td>
<td>591nm</td>
<td>592nm</td>
<td>80</td>
</tr>
</tbody>
</table>

Notes for Table 2:
1. Test current is 350 mA for all LXM2-PL01-xxxx products.
2. Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color. Philips Lumileds tests and bins LUXEON Rebel PC Amber by chromaticity x and y coordinates with a tolerance of ±0.005 on x, y color coordinates.
3. Spectral width at ½ of the peak intensity.
4. Total angle at which 90% of total luminous flux is captured.
5. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is ½ of the peak value.
6. LUXEON Rebel PC Amber product is built with Indium Gallium Nitride (InGaN).

</tbody>
</table>

Note for Table 6:
1. All temperatures refer to the application Printed Circuit Board (PCB), measured on the surface adjacent to the package body.
Mechanical Dimensions

Figure 1. Package Outline Drawing.

Notes for Figure 1:
1. Do not handle the device by the lens—care must be taken to avoid damage to the lens or the interior of the device that can be damaged by excessive force to the lens.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.
Pad Configuration

Note for Figure 2:
1. The Thermal Pad is electrically isolated from the Anode and Cathode contact pads.

Solder Pad Design

Note for Figure 3:
The photograph below shows the recommended LUXEON Rebel layout on Printed Circuit Board (PCB). This design easily achieves a thermal resistance of 7K/W.

Application Brief AB32 provides extensive details for this layout. Additional design resources can be found at www.philipslumileds.com/resources.

Emitter Pocket Tape Packaging

Figure 11. Emitter pocket tape packaging.
Standard Packaging Increment (SPI) is 1000 LEDs per 13" reel.
Product Binning and Labeling

**Purpose of Product Binning**
In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color and forward voltage ($V_F$).

**Decoding Product Bin Labeling**
LUXEON Rebel Emitters are labeled using a three or four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. Using these codes, it is possible to determine optimum mixing and matching of products for consistency in a given application.

Reels of PC Amber Emitters are labeled with a three digit alphanumeric CAT code following the format below.

ABC

A = Flux bin (H, J, K etc.)
B = Color bin (2, 4 etc.)
C = VF bin (D, E, F, G etc.)
Luminous Flux Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON Rebel emitters (tested and binned at 350 mA using current pulse duration of 20ms).

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Company Information

Philips Lumileds is the world’s leading provider of power LEDs for everyday lighting applications. The company’s records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO₂ emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting and home lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at www.philipslumileds.com.
